

## AstraMind Architecture

### System Overview:

AstraMind is built as a modular AI platform.

### Core Layers:

#### 1. Frontend Layer

Responsible for:

- Chat interface
- User accounts
- Dashboard
- User experience

#### 2. Backend Layer

Responsible for:

- Authentication
- Database communication
- Security
- APIs

#### 3. Agent Layer

The AI control center:

- Understand user requests
- Create plans
- Choose tools
- Execute tasks
- Validate results

#### 4. Tools Layer

Expandable capabilities:

- Web search
- Image generation
- Video processing
- Voice
- Coding
- Translation

#### 5. Memory Layer

Stores approved information:

- Preferences
- Projects
- Context

#### 6. Models Layer

Handles AI models:

- Qwen
- Llama
- Mistral
- Other providers

Development Direction:

Start simple:

AI chat + tools + memory

Expand:

Content creation

Media generation

Automation

Developer platform

Goal:

Create a scalable open source AI operating system.
