

AstraMind - Open Source AI Agent Project Plan

Project idea:

Build an open source AI platform that works as an AI assistant and expandable agent system.

Current structure:

AstraMind/

- frontend/

User interface: chat, accounts, dashboard, settings.

- backend/

Server system: users, permissions, data, integrations.

- agent/

The AI brain:

- Understand requests
- Plan tasks
- Select tools
- Execute actions
- Verify results

- tools/

AI abilities:

- Web search
- Image generation
- Video tools
- Voice
- Coding
- Translation

- memory/

User memory system:

- Preferences
- Projects
- Allowed saved information

- models/

AI model management:

Supported models:

- Qwen
- Llama
- Mistral

- docs/

Documentation for developers and users.

Development phases:

Phase 1:
Create the project identity and GitHub repository.

Phase 2:
Create the main folders and organize the project.

Phase 3:
Create the agent core:

- Agent identity
- Workflow
- Tool system

Phase 4:
Connect AI models and prepare model configuration.

Phase 5:
Add tools:

- Search
- Images
- Voice
- Video
- Code assistance

Principles:

- Open source
- Transparent
- Secure
- Respect user privacy
- Build reliable AI features

Project name:
AstraMind
Open Source AI Operating System
